# Practical Programmable Logic Controllers (PLCs) for Automation and Process Control

---

## Contents

<b>1</b>	<b>Introduction to the PLC</b>	<b>1</b>
1.1	Introduction	1
1.2	Basic Block Diagram of the PLC	2
1.3	Size of the PLC System	3
1.4	Components of the PLC Systems	3
1.5	PLC and Process Interaction	5
1.6	Number Systems and Codes	8
<b>2</b>	<b>Processors, Power Supply and Programming Devices</b>	<b>13</b>
2.1	Introduction To The PLC Hardware	13
2.2	Processors (CPU)	13
2.3	PLC Power Supply	17
2.4	Programming Device	17
<b>3</b>	<b>Memory System and I/O Interaction</b>	<b>21</b>
3.1	Memory Systems	21
3.2	Digital I/O Interaction	24
3.3	Analog I/O Interaction	26
<b>4</b>	<b>Digital Input/Output Systems</b>	<b>29</b>
4.1	Basics of Discrete I/O Systems	29
4.2	Types of Discrete Field Devices	30
4.3	Types of Discrete Input Modules	31
4.4	Types of Discrete Output Modules	34
<b>5</b>	<b>Analog Input/ Output Systems</b>	<b>39</b>
5.1	Basic of Analog I/O Systems	39
5.2	Types of Analog Field Devices	40
5.3	Types of Analog Input Modules	41
5.4	Types of Analog Output Modules	47

*Technology Training that Works*

<b>6</b>	<b>Special Function I/O and Serial Communication Interfacing</b>	<b>53</b>
6.1	Introduction	53
6.2	Fast Response Input Module	54
6.3	Counter Module	55
6.4	Positioning Module	58
6.5	Stepper Motor Positioning Module	61
<b>7</b>	<b>Good Installation Practices</b>	<b>67</b>
7.1	Introduction	67
7.2	PLC Modules	69
7.3	PLC Rack	71
7.4	PLC Panel Internal Wiring	72
7.5	PLC Panel Power Supply	72
7.6	Cabling Between PLC And Field Devices	74
7.7	Cabling PLC And Control Room Computers	78
7.8	PLC Earthing	78
7.9	Specific PLC Installation Requirements	81
7.10	Control Room Requirements	83
<b>8</b>	<b>Fundamentals of PLC Programming</b>	<b>87</b>
8.1	Introduction	87
8.2	PLC Programming Steps	89
8.3	Programming Languages	91
8.4	Basic Logic Instructions	101
8.5	Timers	103
8.6	Counter	107
8.7	Program Flow Control Instructions	111
8.8	Data Load and Transfer Instructions	114
8.9	Arithmetic or Math Instructions	117
<b>9</b>	<b>Data Acquisition</b>	<b>123</b>
9.1	Introduction	123
9.2	A Typical Data Acquisition System	123
9.3	Aliasing and the Sampling Theorem	124
9.4	Data Coding System	127
<b>10</b>	<b>Analog and Digital Control</b>	<b>135</b>
10.1	Introduction	135
10.2	Analog Inputs	135
10.3	Signal Filtering	136
10.4	Analog Display	137
10.5	Analog Control	137
10.6	Application of PID Control	139
10.7	Alternative Forms of Analog Control	145

*Technology Training that Works*

<b>11</b>	<b>Fault Tolerance - Spreading the Risk</b>	<b>147</b>
11.1	How Reliable Is Our Equipment?	147
11.2	Project Planning	147
11.3	Key Questions	147
11.4	Two Key Strategies	147
11.5	The People!	149
11.6	Primary Loop Control and Interlocking	149
11.7	The Field Devices	149
11.8	Communications	149
11.9	DCS Structure	150
11.10	PLC System Options	151
11.11	The Costs	151
11.12	Utilities	151
11.13	Spare PLCs	151
11.14	I/O Allocation	152
11.15	Backing up Current Plant Data	152
11.16	Power Supplies	152
<b>12</b>	<b>Peripheral Equipment</b>	<b>153</b>
12.1	Future Directions with Smart Instruments	153
12.2	Highway Addressable Remote Transducer (HART)	154
12.3	ASCII Communications Devices	158
12.4	Intelligent Communication Devices	158
<b>13</b>	<b>Data Communications</b>	<b>159</b>
13.1	Introduction	159
13.2	RS-232	159
13.3	RS-485	164
13.4	Modbus Serial	169
<b>14</b>	<b>Ethernet and TCP/IP</b>	<b>181</b>
14.1	Introduction	181
14.2	10 Mbps Ethernet	181
14.3	100 Mbps Ethernet ('Fast Ethernet')	184
14.5	Gigabit Ethernet	185
14.6	Industrial Ethernet	186
14.7	IP (Internet Protocol)	193
14.8	ARP and RARP	203
14.9	TCP	205
14.10	UDP	212
<b>15</b>	<b>Field buses</b>	<b>215</b>
15.1	Background	215
15.2	Plant Automation Hierarchies	216
15.3	HART	218

*Technology Training that Works*

15.4	DeviceNet	221
15.5	Profibus	229
15.6	Foundation Fieldbus	233
<b>16</b>	<b>Operator Interfaces</b>	<b>239</b>
16.1	Introduction	239
16.2	Ergonomic Considerations	239
<b>17</b>	<b>High Security PLC Systems</b>	<b>247</b>
17.1	Introduction and Terminology	247
17.2	Background to Safety Control Systems	251
17.3	Safety Systems Concepts	251
17.4	Resistance to Random Hardware Failures	260
17.5	Architectures for Safety PLCs	262
17.6	Objections to Standard PLCs Used for Safety	263
17.7	Characteristics of Safety PLCs	267
17.8	Hardware Characteristics of a Safety PLC	267
17.9	Software Characteristics of a Safety PLC	268
17.10	Design Safety PLCs	269
17.11	Redundant Architectures for PLCs- High Availability with High Integrity	271
17.12	Conclusion of Safety PLCs	276
17.13	Application Software	276
17.14	Safe Networking	277
17.15	Classifications and Certification	280
17.16	Summary of High Security PLCs	281
<b>18</b>	<b>System Programming and Implementation</b>	<b>283</b>
18.1	Introduction	283
18.2	Taking Process Inputs	283
18.3	Creating I/O List	284
18.4	Deciding Hardware Configuration of PLC system	286
18.5	I/O Address Assignment	288
18.6	Developing Program Structure	291
18.7	Tips for Developing a PLC Program	293
18.8	Program Verification and Simulation	295
18.9	Creating Documentation	297
<b>19</b>	<b>Best Practice Documentation</b>	<b>299</b>
19.1	What Is a Manual?	300
19.2	Types of Manuals	300
19.3	Planning the Manual	302
19.4	Drafting the Manual	307
19.5	Reviewing the Manual	310

*Technology Training that Works*

<b>20</b>	<b>HMI (Human Machine Interface)</b>	<b>315</b>
20.1	Introduction	315
20.2	Design Consideration of HMI	317
20.3	Hardware Interface Between PLC and HMI	325
20.4	Software Interface Between PLC and HMI	326
<b>21</b>	<b>Electrical Design and Construction</b>	<b>327</b>
21.1	Introduction	327
21.2	PLC Enclosure	327
21.3	Panel Layout	329
21.4	Electrical Wiring of Panel	331
21.5	Gudielines for Panel Electrial Design	332
<b>22</b>	<b>Functional Specification of the System</b>	<b>335</b>
22.1	Introduction	335
22.2	System Requirement Specification	337
22.3	Function Specification of the System	342
22.4	Hi-tech Mining	346
22.5	Circulation of the Functional Specification	376
22.6	Checklist of Factors for Selection of an I/O Module	376
22.7	Selection of the System	378
22.8	Testing of the System	379
<b>23</b>	<b>Fuzzy Logic</b>	<b>381</b>
23.1	Introduction	381
23.2	Understanding Fuzzy Logic	382
23.3	The Rules of Fuzzy Logic	383
23.4	Fuzzy Logic Example Using Rules And Patches	385
23.5	The Achilles Heel of Fuzzy Logic	387
<b>24</b>	<b>Configuration of the System</b>	<b>389</b>
24.1	Initial Concepts	389
24.2	Training on the System	389
24.3	Input/Output Database Creation	390
24.4	General Database Design Tips	398
<b>25</b>	<b>Installation and Comissioning</b>	<b>399</b>
25.1	Introduction	399
25.2	Control Room MCC Requirements	399
25.3	Installation of Equipment	400
25.4	Loop Testing	400
25.5	Manual Control	400
25.6	Automatic Control	401
25.7	System Handover	401
25.8	Maintenance and Training	402

*Technology Training that Works*

<b>26</b>	<b>Working Example of PLC Programs</b>	<b>403</b>
26.1	Introduction	403
26.2	Control Philosophy	403
26.3	Typical PLC Program for Drives	405
26.4	Understanding Advanced Programming Techniques	413
<b>Bibliography</b>		<b>419</b>
<b>Appendices</b>		
	Appendix A Glossary	421
	Appendix B ASCII Table	437
	Appendix C Number Systems	439
	Appendix D Logic Fundamentals	449
	Appendix E Practicals: Part 1	453
	Appendix F Basic Program	471
	Appendix G Functional Logic Diagrams	479
	Appendix H Practicals: Part 2	483
